

3. Intake and Exhaust System

General

- An EGR valve has been provided in the intake passage.
- The shape of the intake pipe has been changed to mount the EGR valve.
- A flange for mounting the EGR pipe has been provided on the exhaust manifold.
- A stainless steel EGR pipe that excels in heat resistance and rust resistance has been adopted.

EGR Valve

By adopting the EGR valve in the intake pipe, this makes it possible to lower the temperature of the EGR valve and re-circulate the great amount of exhaust gas. For details of EGR control, [see page 180](#).
